OBJECTIVE

AI Engineer with 1 year expertise in Machine Learning, Deep Learning, and multi-modal AI systems. Demonstrates strong command of Python, LangChain, LangGraph, and Streamlit for designing and implementing intelligent, tool augmented AI agents. Experienced in integrating retrieval-augmented generation (RAG) workflows and managing scalable NoSQL and vector database solutions. Committed to delivering impactful AI applications in personalized education and multi-modal reasoning while continuously advancing skills in new advancements in AI.

EXPERIENCE

Kairos Computer - Agent Automation Platform July 2025 – April 2026 *AI Engineering Intern*

- Contributed to both Python Fastapi backend and Typescript React Frontend and Monorepo backend to build an AI agent automation service.
- Built modules with strong object oriented programming, deployed AWS lambdas and github workflows for CI/CD.

Stealth Startup - Educational AI Platform March 2025 – June 2025 *AI Research Intern* • Contributed to the development of an AI-powered educational platform focused on building personalized learning experiences for undergraduate students.

- Designed and implemented multi-modal Retrieval-Augmented Generation (RAG) architectures, and explored effective integration strategies with LLMs, including the development of a Model Context Protocol (MCP) to integrate with LLM's.
- Built agentic workflows to manage key processes such as intelligent search, context-aware retrieval, and memory management, enabling dynamic and adaptive system behavior.

PROJECTS

Alpha Brain — Agentic AI Second Brain - ([Live Link](#))

- Built a single autonomous AI agent using Claude and Inngest that captures raw ideas via Telegram, parses them into structured entries with actions and due dates, and persists them to Supabase — reducing idea capture time to under 3 seconds.
- Engineered event-driven cron jobs with Inngest to power deadline notifications, daily digest briefings, and AI-generated article drafts delivered directly through Telegram, with multi-step retry logic and quiet hours support.
- Designed a dynamic JSONB-driven form renderer in Next.js allowing users to build custom idea templates with modular elements including stock ticker widgets with live Yahoo Finance sparklines

InTrust — AI Insurance Recommendation Engine - ([Live Link](#))

- Built an end-to-end recommendation engine using LLM's that scrapes and normalizes IRDAI-mandated CIS documents from 9+ insurers into a unified schema, enabling comparison across 300+ health and life policies. .
- Built a retrieval-augmented extraction pipeline (per-policy Pinecone namespaces, Qwen3 embeddings, grounded LLM

extraction) structuring 300+ insurance policies into a [30]-field schema at ~\$0.08/policy with citation-verified for every field.

- Designed a chat-first interface where non-technical users describe their needs in plain language and receive a ranked, explained policy recommendation in under 10 minutes.

Multi Modal Youtube RAG Chrome Extension - ([Repo Link](#))

- Build Custom Multi Modal RAG System from scratch to intelligently chat with youtube videos by combining transcript analysis with frame-synchronized visual retrieval, resulting in contextually rich AI responses that include both explanations and corresponding diagrams/proofs.
- Powerful notes feature to save learnings, create notes across videos and use them while generating responses.

English-to-Italian Translator Using Transformers in PyTorch - ([Repo Link](#))

- Implemented Transformer model from scratch in PyTorch with custom multi-head attention mechanisms, positional encoding, and optimized feedforward layers for sequence-to-sequence translation.* Developed end-to-end training pipeline including custom dataset preprocessing, hyperparameter optimization, and efficient batch processing.

SKILLS

Languages: Python, JavaScript, TypeScript, HTML/CSS, MySQL, PostgreSQL.

WebTechnologies: React, FastAPI, Supabase, MongoDB.

Agentic AI: LangChain, LangGraph, OpenAI API, CrewAI, Pydantic AI.

ML kit: Machine learning, NLP, Deep Learning, Prompt engineering.

Tools: Git, Github, Cursor, AWS Lambda, EC2, ECS, ECR, CI/CD Github workflows.

EDUCATION

RGUKT - RK Valley June 2022 – 2026 *Bachelor of Technology - Computer Science and engineering* CGPA – 8.7

RGUKT - RK Valley January 2020 – 2022 *Pre University Course in MPC* CGPA – 9.8 **Sri Chaitanya E.M School**

March 2019 – 2020 *SSC* GPA – 10.0

AWARDS & PARTICIPATION

- Presented an idea for a AI powered postal automation at the Smart India Hackathon (SIH 24)
- Qualified GATE 2025 – Data Science and Artificial Intelligence (DA)

CERTIFICATIONS

- Introduction to Deep Learning (IIT-Ropar) - Top 5% (NPTEL) *Issued by IIT – Ropar*
- Intro to Machine Learning *Issued by Hitloop Learning Platform*
- ChatGPT Prompt Engineering for Developers *Issued by [DeepLearning.ai](#)*
- Building Systems with ChatGPT API *Issued by DeepLearning.ai* Data Science: Machine Learning *Issued by EdX*
